Water Hydrant Flushing Schedule – 2024

The six water hydrants located in Indian Creek subdivision will be flushed on the dates listed below. Water hydrants are flushed in order to reduce the build-up of sediments in our water system. This is an important process for improving water quality. Our water operator will flush one hydrant at a time and allow it to run for 10-15 minutes (the next in line hydrant is opened concurrently for a brief period to keep water flowing through the system). Water pressure in our system's lines is maintained by the 35,000 gallons of water in our tower, however, pressure in home lines will be reduced during flushing much like when multiple faucets are opened in your homes. Flushing the hydrants will also stir up sediments so please follow the procedures listed below:

- Do not run water during the flushing time period.
- Following flushing, run water through faucets until clear. We recommend this be done by-passing any treatment/filtering system in your home because of the increased sediment stirred up during the flushing process.

Please mark your calendars with the dates listed below. Flushing will be done between 5:30 a.m. and 6:30 a.m. weather permitting. Hydrants will not be flushed in freezing conditions or other inclement weather.
